A Resolved endpoint, selective pulse
Population shift from native baseline
Pulse duration (declared units)
Classical two-state control
Driven qubit
B Exact response boundary (no extra dephasing)
First local minimum of gamma I(t)
Coupling / damping, q = g / gamma
Certified threshold
4.57066453253 < q < 4.57066453254
C A classical false-positive control
Population shift
Pulse duration (declared units)
Resolved endpoint {1}
Coarse region {1,2}
D Calibration can reverse the best access design
Certified acquisition energy (model units)
Two-sensor cut
Single-sensor cut
Zero floors
Calibration floors
