A Sharp classical explanation boundary
Reset defect 0
Reset defect 0.25
Reset defect 0.5
Reset defect 1
Depolarizing qubit
Normalized occupation contrast
Observation horizon (caps a = b = 1)
B Conditional inference from synthetic counts
No compatible defect ≤ 1
343 / 600 encoded successes
Required reset defect (95% lower bound)
Supplied common crossing cap
C Matched control removes a short-pulse penalty
Unmatched preparation bound
Matched control bound
Certified preparation contribution to current error
Pulse duration (declared units)
D Same contrast and calibration contract
Certified sufficient endpoint records
600
1100
1181
Exact fixed
Anytime horizon
Chernoff fixed
